We're back - this time for good

We know it has been a long time since you have last heard from us, but rest assured: you are certainly not forgotten! With this newsletter, we promise to keep in touch on a regular basis from now on and we look forward to supplying you with relevant news from the gas industry and KC ProSupply.

SECOND SUN Flameless Catalytic Tank Heater

What if you didn't have to rely on Mother Nature to heat up your tank? The SECOND SUN flameless catalytic tank heater is an ideal solution when our environment is unable to supply the needed energy because the warm, low intensity heat from the heater mimics the energy from the sun. SECOND SUN is designed to safely and efficiently boost natural vaporization in propane, LPG and anhydrous ammonia storage tanks. The SECOND SUN tank heater is now available at the KC ProSupply centres.

Contact your nearest KC ProSupply center for further information on the SECOND SUN Tank Heater.

Employee profile: Finding my right shelf

Make sure you read the employee profile of our latest addition to the KC ProSupply team, Sales Engineer Amar Al-Karradi, after his first year with us. Amar always wanted to focus on and become a specialist within a specific industry - like the LPG industry - which is why he left his previous job. He found his right shelf in KC ProSupply and in the team, his role is to offer the right LPG products and solutions to his customers' businesses and advise the customers on how to operate the equipment.

"My many diverse tasks offer a very rewarding experience and they continuously improve my knowledge and my skills within the LPG business." Amar excitedly explains.
